Education

Bachelor of Science Graduation: Spring 2028
Kent State University ● Kent, OH GPA: 3.9/4.0
Computer Engineering Technology

Professional Summary

Motivated Computer Engineering Technology student at Kent State University with strong foundations in programming, electronics, and problem solving. Experienced in Python programming, Arduino systems, and introductory machine learning. Known for reliability, teamwork, and adaptability. Interested in gaining hands-on engineering experience through internships in automation, electronics, and engineering technology.

Technical Skills

- **Programming:** C, Python (Certified), Java, HTML
- **Tools & Platforms:** GitHub, Microsoft Office Suite, Arduino (Certified)
- **AI & Machine Learning:** Basic understanding of TensorFlow, Keas, Librosa, and Azure Machine learning
- **Automation & Data Handling:** Experience with data extraction and processing in Python
- **Software Development:** Familiar with Java and API integrations, eager to learn more

Work

CAE Ambassador Aug 2025 – Present
College of Aeronautics and Engineering, Kent State University ● Kent, OH

- Represent the College of Aeronautics and Engineering at university and community events.
- Assist faculty and staff in organizing and running college events, workshops, and outreach programs.
- Served as a **judge for the NEOTech Robotics Competition**, evaluating student robotics projects and providing feedback during the event hosted at Kent State University as part of the NEOTech conference. Link
- Volunteered in supporting the **FIRST LEGO League Regional Qualification and the FIRST Tech Challenge (FTC) Qualifier** hosted at the college on January 31, helping with event operations and assisting teams during the robotics competition.

Emerging Engineers Camp Counselor June 2025-July 2025
College of Aeronautics and Engineering ● Kent, OH

- Guided **middle school campers** in building and programming the Elegoo robotic car, explaining its components and functions.
- Performed **soldering of wires and electronic components** while helping assemble robotic arm kits used by **high school students** during camp activities.
- Helped design and build a **cyber-security themed escape room** where students worked through technical challenges to stop a simulated system breach.
- Programmed an **RFID-based solution** where scanning the correct tag triggered the system to "stop" the breach, demonstrating practical coding and hardware integration.
- Fostered a welcoming and inclusive environment while encouraging collaboration, curiosity, and confidence in STEM learning through hands-on projects.

Project

Voice-to-Age AI Calculator Mar 2023-Nov 2023
Mayfield High School ● Mayfield, OH

- Developed a machine learning model designed to estimate a person's age based on voice input.
- Implemented audio data processing and model training using Python and machine learning frameworks.
- Built the project for a competition organized by the Ministry of Digital India in partnership with Intel India.
- Tested and improved the model to increase prediction accuracy.
    - **Technologies Used:** Python, TensorFlow, Keras, Librosa
    - **Key Contributions:** Implemented data processing, trained AI model, and conducted testing to improve accuracy.
    - **Achievement:** Received certification from competition organizers for project completion.
